Customer Problem Statement :

Organizations often handle network service requests through manual processes such as emails, messages, or separate tracking methods. This can result in delays, repeated data entry, difficulty tracking request status, and lack of a clear approval process. Users may also have limited visibility into the progress of their requests. The Automated Network Request Management project addresses these challenges by providing a centralized ServiceNow-based system for submitting, tracking, approving, and managing network requests.

 I am	Describe customer with 3-4 key characteristics - who are they?	An employee of the organization who needs network services (e.g., internet access, WiFi, VPN, firewall access, or network troubleshooting) to perform daily work efficiently.	
 I'm trying to	List their outcome or "job" the care about - what are they trying to achieve?	Submit a network request easily through a single platform, provide necessary details, and track the approval status until the request is completed.	
 but	Describe what problems or barriers stand in the way - what bothers them most?	Network requests are often raised through emails or messages, which leads to delays, repeated follow-ups, lack of clear tracking, and uncertainty about the current status of the request.	
 because	Enter the "root cause" of why the problem or barrier exists - what needs to be solved?	The requests are handled manually through different communication channels without a centralized system, resulting in no proper tracking, delays in approvals, and lack of visibility for users.	
 which makes me feel	Describe the emotions from the customer's point of view - how does it impact them emotionally?	Frustrated, as I have to follow up multiple times for updates, and uncertain about when my request will be approved and completed. This affects my productivity and confidence in the process.	

I am an employee requesting a network service, trying to submit and track my network request through a simple process, but manual requests can be delayed and it is difficult to know the approval status because requests are handled through emails or separate manual processes without centralized tracking, it makes me feel frustrated progress of my request.
