Empathy Map Canvas:

The Empathy Map Canvas helps understand the user's problems while making network requests. Users want an easy way to submit and track requests but often face delays, unclear status, and scattered communication. The project addresses these issues through a centralized ServiceNow system with automated approvals, tracking, and notifications.

Example:

Think & Feel

- “When will my request be approved?”
- Wants a quick, clear process.

Hear

- IT team instructions.
- Updates about request delays.

See

- Manual forms/emails.
- No clear request status.

Say & Do

- Submits network requests.
- Follows up for updates.
- Checks approval status.

Pain

- Delays and repeated follow-ups.
- Scattered communication.
- Unclear status.

Gain

- One place to submit requests.
- Automated approvals.
- Easy tracking and notifications.
